TABLE OF CONTENTS

1. William Blake: <i>Songs of Innocence and of Experience</i>	1
2. Robert Browning: <i>Porphyria's Lover</i>	5
3. Lewis Carroll: <i>The Mouse's Tale</i>	7
4. William Shakespeare: <i>Sonnet 17</i>	11
5. Algernon Charles Swinburne: <i>Sestina</i>	15

Examples for Module 4: Poetry

1. William Blake: *Songs of Innocence and of Experience*

This example features a fragment of William Blake's *Songs of innocence and of experience*, encoded and made available by the University of Virginia Library, for their Text Collection. It forms a good example of how an anthology can be encoded. The work is considered as a single text (<text>) whose <body> contains both books. Both *Songs of Innocence* and *Songs of Experience* are encoded as <div1> numbered text divisions, with a @type attribute with value book. Inside these books, all 45 poems are encoded as <div2 type="poem">. All poems have a title (<head>) and are subdivided into stanzas (<lg type="stanza">) and lines (<l>). Page breaks are recorded with <pb/> elements, whose @n attribute contain the page number.

```

<text xmlns="http://www.tei-c.org/ns/1.0" xml:id="d1">
  <body xml:id="d2">
    <div1 type="book" xml:id="d3">
      <head>Songs of Innocence</head>
      <pb n="4"/>
      <div2 type="poem" xml:id="d4">
        <head>Introduction</head>
        <lg type="stanza">
          <l>Piping down the valleys wild, </l>
          <l>Piping songs of pleasant glee, </l>
          <l>On a cloud I saw a child, </l>
          <l>And he laughing said to me: </l>
        </lg>
        <lg type="stanza">
          <l>"Pipe a song about a Lamb!" </l>
          <l>So I piped with merry cheer. </l>
          <l>"Piper, pipe that song again;" </l>
          <l>So I piped, he wept to hear. </l>
        </lg>
        <lg type="stanza">
          <l>"Drop thy pipe, thy happy pipe; </l>
          <l>Sing thy songs of happy cheer:" </l>
          <l>So I sung the same again, </l>
          <l>While he wept with joy to hear. </l>
        </lg>
        <lg type="stanza">
          <l>"Piper, sit thee down and write </l>
          <l>In a book, that all may read." </l>
          <l>So he vanis'd from my sight, </l>
          <l>And I pluck'd a hollow reed, </l>
        </lg>
        <lg type="stanza">
          <l>And I made a rural pen, </l>
          <l>And I stain'd the water clear, </l>
          <l>And I wrote my happy songs </l>
          <l>Every child may joy to hear. </l>
        </lg>
      </div2>

2. Robert Browning: *Porphyria's Lover*

The following example is the poem *Porphyria's Lover* by Robert Browning. Although no formal line groups are discerned, it has a systematic rhyme scheme repeating every 5 lines. This is indicated in the outmost `<lg>`'s `@rhyme` attribute. Some of the lines break up syntactic sentences; those have been marked with the value "yes" for an `@enjamb` attribute.

.....

- 1 Based on a TEI P4 XML encoding of Blake, William (1789). *Songs of Innocence and of Experience*. London: W Blake. Encoded and made available by the University of Virginia Library, Text Collection at <http://etext.lib.virginia.edu/toc/modeng/public/BlaSong.html>

<lg rhyme="ababb">
 <l>THE rain set early in to-night,</l>
 <l>The sullen wind was soon awake,</l>
 <l>It tore the elm-tops down for spite,</l>
 <l>And did its worst to vex the lake:</l>
 <l>I listen'd with heart fit to break.</l>
 <l>When glided in Porphyria; straight</l>
 <l>She shut the cold out and the storm,</l>
 <l enjamb="yes">And kneel'd and made the cheerless grate</l>
 <l>Blaze up, and all the cottage warm;</l>
 <l enjamb="yes">Which done, she rose, and from her form</l>
 <l>Withdrew the dripping cloak and shawl,</l>
 <l enjamb="yes">And laid her soil'd gloves by, untied</l>
 <l>Her hat and let the damp hair fall,</l>
 <l>And, last, she sat down by my side</l>
 <l>And call'd me. When no voice replied,</l>
 <l>She put my arm about her waist,</l>
 <l>And made her smooth white shoulder bare,</l>
 <l>And all her yellow hair displaced,</l>
 <l>And, stooping, made my cheek lie there,</l>
 <l>And spread, o'er all, her yellow hair,</l>
 <l enjamb="yes">Murmuring how she loved me—she</l>
 <l>Too weak, for all her heart's endeavour,</l>
 <l>To set its struggling passion free</l>
 <l>From pride, and vainer ties dissever,</l>
 <l>And give herself to me for ever.</l>
 <l>But passion sometimes would prevail,</l>
 <l>Nor could to-night's gay feast restrain</l>
 <l>A sudden thought of one so pale</l>
 <l>For love of her, and all in vain:</l>
 <l>So, she was come through wind and rain.</l>
 <l>Be sure I look'd up at her eyes</l>
 <l>Happy and proud; at last I knew</l>
 <l enjamb="yes">Porphyria worshipp'd me; surprise</l>
 <l>Made my heart swell, and still it grew</l>
 <l>While I debated what to do.</l>
 <l>That moment she was mine, mine, fair,</l>
 <l>Perfectly pure and good: I found</l>
 <l enjamb="yes">A thing to do, and all her hair</l>
 <l>In one long yellow string I wound</l>
 <l>Three times her little throat around,</l>
 <l>And strangled her. No pain felt she;</l>

```

<|>I am quite sure she felt no pain.</|>
<|>As a shut bud that holds a bee,</|>
<| enjamb="yes">I warily oped her lids: again</|>
<|>Laugh'd the blue eyes without a stain.</|>
<|>And I untighten'd next the tress</|>
<| enjamb="yes">About her neck; her cheek once more</|>
<|>Blush'd bright beneath my burning kiss:</|>
<|>I propp'd her head up as before,</|>
<|>Only, this time my shoulder bore</|>
<|>Her head, which droops upon it still:</|>
<|>The smiling rosy little head,</|>
<|>So glad it has its utmost will,</|>
<|>That all it scorn'd at once is fled,</|>
<|>And I, its love, am gain'd instead!</|>
<| enjamb="yes">Porphyria's love: she guess'd not how</|>
<|>Her darling one wish would be heard.</|>
<|>And thus we sit together now,</|>
<|>And all night long we have not stirr'd,</|>
<|>And yet God has not said a word!</|>
</lg>

```

2

3. Lewis Carroll: *The Mouse's Tale*

The following example is an excerpt from Lewis Carroll's *The Mouse's Tale*, a poem appearing in the third chapter of *Alice in Wonderland*. It is a concrete poem in which the lines consist of only a couple of words, laid out in such a way that they visualise the mouse's winding tail:

.....

2 TBE crafted example encoding of *Porphyria's Lover*. In: Browning, Robert (1842), *Dramatic Lyrics*.

"Fury said to
 a mouse, That
 he met
 in the
 house,
 'Let us
 both go
 to law:
I will
 prosecute
you.—
 Come, I'll
 take no
 denial;
 We must
 have a
 trial:
 For
 really
 this
 morning
 I've
 nothing
 to do.'
 Said the
 mouse to
 the cur,
 'Such a
 trial,
 dear sir,
 With no
 jury or
 judge,
 would be
 wasting
 our breath.'
 'I'll be
 judge,
 I'll be
 jury.'
 Said
 cunning
 old Fury;
 'I'll try
 the whole
 cause,
 and
 condemn
 you
 to
 death.'

Fig. 1.

For the encoder, this specific visual layout challenges the TEI's orientation towards logical structures to some extent. In the example, the visual lines are encoded as logical lines (<L>); the

visual particularities (font size, indentation) are formalised as values of a **@rend** attribute on each line. Of course, any value system is allowed for the **@rend** attribute; it's up to the rendition layer to decide how to interpret these values and format them on the screen / in print.

Alternatively, the lines could have been treated on a more logical level, spanning multiple physical lines. The line breaks then could have been encoded with **<lb/>** elements, and specific visual characteristics as values for **@rend** attributes on **<seg>** elements. Since the spaces are quite significant, the TEI special purpose element **<space>** could have been used as well.

```

<l rend="font-size(60%) indent(68px)">to</l>
<l rend="font-size(60%) indent(82px)">death.' "</l>
</lg>

```

3

4. William Shakespeare: *Sonnet 17*

The following example illustrates very elaborate encoding of a sonnet by William Shakespeare. As most sonnets, this poem is structurally analysed in three quatrains and one couplet. The lines themselves are further divided in metrical feet (<seg type="foot">) whose metrical analysis is provided in their containing <lg>'s @met attribute. For feet that metrically diverge from the metrical system the actual metrical realisation is given in a <real> attribute. Where a foot runs over several syntactic phrases, the boundary between these phrases is marked with a <caesura> element. The rhyme scheme is encoded in the @rhyme attribute at the stanza level. In the example, the relevant <teiHeader> fragment is included for clarity's sake.

4

.....

- 3 TBE crafted example encoding of Carroll, Lewis (1865). *Alice's Adventures in Wonderland*. New York: D. Appleton and co., 37, based on its hypertext encoding at <http://bootless.net/mouse.html>.
- 4 Note how the original whitespace is preserved in the <seg> elements.

```

5. Algernon Charles Swinburne: *Sestina*

This example features a so-called ‘Sestina’, a highly structured verse form consisting of 6 six-line stanzas followed by 1 three-line stanza. While the same set of six words conclude the lines of each stanza, in each stanza they occur in a different order. Since Swinburne in this example adheres to a strictly alternating rhyming scheme (if the internal rhyme of the tercet is not taken into account), the line ending patterns in this example vary from the traditional structural pattern for a sestina.

In this example, the rhyming scheme is indicated per stanza, using the **@rhyme** attribute on the stanza's **<lg>** element. Rhyming words are marked with **<rhyme>** elements, with a **@label** attribute indicating their place in the rhyming scheme. In order to trace the line ending scheme,

Unpublished Master's Dissertation, London: University College London (based on Alexander, Peter (1978) *The Complete Works of William Shakespeare*. London: Collins.).

the ending words of the first stanza have been identified with a **@xml:id** attribute. Since they were already marked with a **<rhyme>** element, identification happens on this level. In the other stanzas, each line ending word is connected to its counterpart of the first stanza with a **@corresp** attribute. This is one of the global linking attributes, whose value formalises a correspondence relationship with another identified element (see [P5 16.4 Correspondence and Alignment](#)). Since the reference is to a local element (an identified element in the same document), its value takes the form of a shorthand local pointer by simply preceding the target's **@xml:id** value with a hash sign #. Here too, the **<rhyme>** element provides a sufficient peg for pointing out this correspondence. Otherwise, if no other element would have been available, a **<seg>** element could be introduced for identifying or referring to a span of text.
