Although the first TEI by Example module does not introduce any actual TEI markup, following exercise should help you getting acquainted with:

- the spirit of XML markup
- the spirit of TEI P5 XML markup
- the TEI by Example Validator application (see the right-hand tab of this exercise), and how it can help you to instantaneously check your TEI XML input for correctness

Can you update the following sample fragment of a book chapter encoded in SGML TEI P3 to P5?

1. XML attribute values must be quoted.
2. XML elements must nest properly (i.e., all start tags must have a corresponding end tag).
3. XML tag names are case sensitive.
4. The pre-P5 @id attribute has been updated to @xml:id in TEI P5.
