5. Summary

This tutorial module has focused on the encoding of specific phenomena of drama texts in TEI. When all of the concepts discussed are applied to the example text, this is how its transcription could look:

Module 5: Drama

<Twisting and turning, the slithy toves did gyre and gimble in the wabe. All mimsy were the borogoves, and the mome raths outgrabe.

"Beware the Jabberwock, my son! The jaws that bite, the claws that catch! Beware the Jubjub bird, and shun the frumious Bandersnatch!"

ACT I: SCENE 1: HELLO WORLD

In a clean room without windows, a table stands in the middle, carrying a computer screen. The screen blinks. The computer emits random beeps. A big screen on the left hand side of the stage displays the word HELLO, and will be used to project the contents of the computer screen. A big screen on the right hand stage of the stage displays the word WORD, until the action starts. Then, the user's face is filmed in close up and projected onto this screen. (user enters room, walks towards the table, takes a seat, and reads what's on the screen)

[spotlight follows user]
